

# **CSE310 Project 3**

Raquel Lippincott  
Dr. Tong M/W 6:00PM

## **I. Encountered Problems**

I had a lot of problems with general.asu.edu that slowed me down. A big coding issue I had – which really shouldn't have been so hard to figure out – is that I forgot to clear my vectors and queues when necessary. For instance, for shortest path, I kept having issues with the way my path would print. Although the length of the path would be correct, it would print a path that was actually a lot longer than the value. This is because I wasn't clearing the memory every time I wanted to run shortest-path.

## **II. Known Bugs**

After numerous tests, I am unaware of any issues with my program.

## **III. Collaboration and Sources**

Because this is an individual project, I did not collaborate with any of my peers for the completion of my source code. However, I did utilize class notes from Dr. Tong's Fall 2015 M/W 6:00PM section of CSE310, and I also referred to Ry's Git Tutorial in order to set up the version control system I used throughout my code implementation.
